

Grade 9

A case study

A student from the US

He has been studying with us for almost three years now.

The beginning

- He already had good grades in his studies.
- He was already very busy with extra classes and extracurricular activities, which was a red flag for us.
- We reluctantly agreed to induct him into our program.

All the screenshots of the activities are taken from work done by the student in the last two years.

No other work from his batch has been included in this document.

We started with basic concepts and are dealing now with advanced topics taught in senior classes.

The snapshots may seem a bit advanced for his grade. We started with his grade and built his conceptual competence to bring him to this level. We do this with all our students. The other students in his batch have shown similar performance.

The start

- He joined a batch of six students.
- Three have dropped out since then.
- We run three one-hour sessions per week.

The story of three years

A summary of the activities the student has done in the last three years since he joined us.

Having taught him and his batch calculus, vectors, geometry, probability, abstract algebra, and statistics, we are now teaching them AI/ML in Python this summer. He is going into grade 10 this year!

They are already very good Python programmers, like all our other students.

Partial snapshot of his online folder

All students have their individual online folder of activities that includes programming as well as non-programming activities.

The recordings and notes of sessions are stored separately and made accessible to the students.

He, like all our students, is also a good programmer because it helps them learn Math, Physics, Chemistry, Geography, and other subjects better and faster.

He knows Python (including pandas, numpy, and sympy), JavaScript, HTML, CSS, and SVG.

He is familiar with Java and OOP. It was never our objective to turn him into a professional programmer. Yet, he is only one month away from being good enough to work as a professional software programmer.

'Managers' are our modern form of books and question banks

All managers can generate an unlimited number of non-repetitive questions based on a set of concepts.

The managers shown in this document are only those which were done by this student. He used a large number of managers, but only a few are presented in this document.

Each manager contains a large number of problem types. This document shows it for a few managers. In other cases, random sample problems have been shown.

Managers from math.

```
In [1]: 1 from xv.math.algebra import AlgebraicExpressionManager
```

```

```

```
Problem template: _problem
Find the absolute value of
if  $x < 0$ ,  $y \geq 0$ 
```

Answer:
 $y - x$

Solution:
 $\text{abs}(x - y)$

$= |x - y|$

Let $x = -8$, and $y = 5$

$= |(-8) - (5)|$

$= |-13|$

$= 13$

Hence,
 $|x - y| = y - x$ See r

Note:
 $x + y = -3$
 $x - y = -13$
 $y - x = 13$
 $-(x + y) = 3$

$-5v + 8x + 2z$
 $-9v - w + x - 2y + 6z$

Answer:
 $4v + w + 7x + 2y - 4z$

Solution:
 We have to subtract second expression from 1
 $-5v + 8x + 2z$
 $-9v - w + x - 2y + 6z$

The coefficients of variables v, w, x, y, z are:

$$\begin{bmatrix} v & w & x & y & z \\ -5 & 0 & 8 & 0 & 2 \\ -9 & -1 & 1 & -2 & 6 \end{bmatrix}$$

As We have to subtract second expression from we will change sign of each coefficient in the

$$\begin{bmatrix} v & w & x & y & z \\ -5 & 0 & 8 & 0 & 2 \\ 9 & 1 & -1 & 2 & -6 \end{bmatrix}$$

Add the columns:
 $\begin{bmatrix} v & w & x & y & z \\ 4 & 1 & 7 & 2 & -4 \end{bmatrix}$

\Rightarrow The sum of expressions:
 $= 4v + w + 7x + 2y - 4z$

We can rewrite

$$\sqrt[3]{261} = \sqrt[3]{(216 + 45)} \quad \text{where } x = 216 \text{ and}$$

$$f(\Delta x + x) = (\text{Value of function}) + (\text{Rate of change}) \cdot \Delta x$$

$$= f(x) + \left(\frac{d}{dx} f(x) \right) \cdot \Delta x$$

$$= f(x) + \left(\frac{d}{dx} \sqrt[3]{x} \right) \cdot \Delta x$$

$$= f(x) + \left(\frac{1}{3x^{2/3}} \right) \cdot \Delta x$$

$$= \sqrt[3]{216} + \left(\frac{216^{-2/3}}{3} \right) \cdot (45)$$

$$= 6 + \frac{5}{12}$$

$$= \frac{77}{12} \quad \text{actual value is } \sqrt[3]{261}$$

Solve $\frac{(4-5)}{6 \times 8 + \frac{(9-5)}{(\frac{5}{-8})+(5x-4)} \times (6-2)}$

Answer:

1485

31552

Solution:

$$\frac{(4-5)}{6 \times 8 + \frac{(9-5)}{(\frac{5}{-8})+(5x-4)} \times (6-2)}$$

$$= \frac{9}{6 \times 8 + \frac{(9-5)}{(\frac{5}{-8})+(5x-4)} \times (6-2)} \quad \text{as } (4-5) = -1$$

$$= \frac{9}{4 \times 6 \times 8 + \frac{(9-5)}{(\frac{5}{-8})+(5x-4)}} \quad \text{as } (6-2) = 4$$

Find relation between a , $v(s)$ and s

where:

a = acceleration

$v(s)$ = velocity

s = displacement

t = time

Answer:

$$v^2(s) = 2as + v^2(0)$$

Solution:

First Part:

$$a = \frac{d}{dt} v(s)$$

$$\Rightarrow a = \frac{d}{ds} v(s) \frac{d}{dt} s$$

$$\Rightarrow a = v(s) \frac{d}{ds} v(s)$$

$$\Rightarrow \int_0^s a ds = \int_0^s v(s) \frac{d}{ds} v(s) ds$$

$$\Rightarrow as = -\frac{v^2(0)}{2} + \frac{v^2(s)}{2}$$

$$\Rightarrow 2as = -v^2(0) + v^2(s)$$

Second Part:

$$a = v(s) \frac{d}{ds} v(s)$$

Find length of the curve $f(x) = -4x^2 + 4x + 3$ between $x = 1$ and $x = 2$.

Answer:

$$-\frac{\sqrt{17}}{4} - \frac{\operatorname{asinh}(4)}{16} + \frac{\operatorname{asinh}(12)}{16} + \frac{3\sqrt{145}}{4}$$

Solution:

The length of curve

$$dL = \sqrt{dx^2 + dy^2}$$

$$= \sqrt{d(f(x)^2 + dx^2)}$$

$$= \sqrt{\left(\frac{d}{dx} f(x) \right)^2 + 1} dx$$

$$\rightarrow L = \int_1^2 \sqrt{\left(\frac{d}{dx} f(x) \right)^2 + 1} dx$$

$$= \int_1^2 \sqrt{\left(\frac{d}{dx} (-4x^2 + 4x + 3) \right)^2 + 1} dx$$

Find surface area of the cone whose base has radius 1 and height 3.

Answer:

$$\pi(1 + \sqrt{10})$$

Solution:

A cone has one circular base and slant surface area = area of circular base + slant surface area

$$= \pi r^2 + \pi r l$$

where l is slant length and is equal to $\sqrt{h^2 + r^2} = \sqrt{(3^2 + 1^2)} = \sqrt{10}$

$$= \pi r(r + l)$$

$$= \pi \times 1(1 + \sqrt{10})$$

$$= \pi \times 1(1 + \sqrt{10})$$

$$= \pi(1 + \sqrt{10})$$

Cone (radius: 1, length: 3, center: (0, 0, 0), theta: 2π)

The value of $\log_7 343.1$ is: -0.2625, 0.04898, 1.007, 2, 3

Answer:

3

Solution:

$$\log_7 343.1 = 3$$

Import matplotlib.pyplot as plt
from matplotlib import pyplot as plt

The value of $\frac{4}{3!}$ is: 11.43, 6.667, 4.706, 3.636, 2.5, 1.905, 1.29

Answer:

1.29

```
1 ke.getRandomProblem(problem_type = 18)
```

Simplify the followings:

$$\frac{8.0 + 0.4}{40.0} * \frac{1}{6.0}$$

```
1 ke.printAnswer()
```

$$\frac{7}{200} \quad \text{or}$$

0.035

```
1 ke.printSolution()
```

$$\frac{8.0 + 0.4}{40.0} * \frac{1}{6.0}$$

$$= \frac{8.4}{40.0} * \frac{1}{6}$$

$$= \frac{42}{40} * \frac{1}{6}$$

$$= \frac{42 * 1}{40 * 5} * \frac{1}{6}$$

$$= \frac{42 * 1 * 1}{40 * 5 * 6}$$

$$= \frac{42}{1200}$$

$$= \frac{7}{200}$$

Write arithmetic series of z^k terms, with first term (t_0) as $\sqrt[k]{x}$ and the common difference as $-y$

Answer:
 $((\sqrt[k]{x}) + (-y) \cdot 0) + ((\sqrt[k]{x}) + (-y) \cdot 1) + ((\sqrt[k]{x}) + (-y) \cdot 2) + \dots + ((\sqrt[k]{x}) + (-y) \cdot (z^6 - 2)) + ((\sqrt[k]{x}) + (-y) \cdot (z^6 - 1))$

It can also be written as $\sum_{k=0}^{z^6-1} ((\sqrt[k]{x}) + (-y) \cdot k)$

Solution:
next term = (previous term) + (common difference)
 $t_n = t_0 + n * \text{common difference}$

Please note that we start count of terms from 0.

$$t_0 = \sqrt[k]{x} = ((\sqrt[k]{x}) + (-y) \cdot 0)$$

$$t_1 = t_0 + (-y) = ((\sqrt[k]{x}) + (-y) \cdot 0) + (-y) = ((\sqrt[k]{x}) + (-y) \cdot 1)$$

$$t_2 = t_1 + (-y) = ((\sqrt[k]{x}) + (-y) \cdot 1) + (-y) = ((\sqrt[k]{x}) + (-y) \cdot 2)$$

...

$$t_{z^6-1} = t_{z^6-2} + (-y) = ((\sqrt[k]{x}) + (-y) \cdot (z^6 - 2)) + (-y) = ((\sqrt[k]{x}) + (-y) \cdot (z^6 - 1))$$

$$t_{z^6} = t_{z^6-1} + (-y) = ((\sqrt[k]{x}) + (-y) \cdot (z^6 - 1)) + (-y) = ((\sqrt[k]{x}) + (-y) \cdot (z^6))$$

Therefore, the series is $((\sqrt[k]{x}) + (-y) \cdot 0) + ((\sqrt[k]{x}) + (-y) \cdot 1) + ((\sqrt[k]{x}) + (-y) \cdot 2) + \dots + ((\sqrt[k]{x}) + (-y) \cdot (z^6 - 2)) + ((\sqrt[k]{x}) + (-y) \cdot (z^6 - 1))$

$$= x * *(1/9) + x * *(1/9) - y + x * *(1/9) - 2 * y + \dots + x * *(1/9) - y * (z * *6 - 2) + x * *(1/9) - y * (z * *6 - 1)$$

It can also be written as $\sum_{k=0}^{z^6-1} ((\sqrt[k]{x}) + (-y) \cdot k)$

```
1 ke.getRandomProblem(problem_type = 19)
```

Prove that

$$\frac{2}{5} < \log_{10} 3 < \frac{1}{2}$$

```
1 ke.printAnswer()
```

$$\frac{2}{5} < \log_{10} 3 < \frac{1}{2}$$

```
1  
2  
3 ke.printSolution()  
4
```

$$\log_{10} 3 \quad ? \quad \frac{2}{5}$$

$$\Rightarrow 3 \quad ? \quad 10^{\frac{2}{5}}$$

$$\Rightarrow 3^5 > 10^2,$$

Now $\log_{10} 3 \quad ? \quad \frac{1}{2}$

$$\Rightarrow 3 \quad ? \quad 10^{\frac{1}{2}}$$

$$\Rightarrow 3^2 < 10, \text{ which is true}$$

Hence $\frac{2}{5} < \log_{10} 3 < \frac{1}{2}$

Solve the followings:

Q1. $-- -9$

Q2. $-- 9$

Q3. $9 * 9$

Q4. $-9 * 9$

Q5. $9 * -9$

Q6. $-9 * -9$

Q7. $-- 9 * 9$

Q8. $9 * -- 9$

Q9. $-- 9 * -- 9$

Q10. $-9 * -- 9$

Q11. $-- 9 * -9$

Solution 28.

$$(-2)(-10) = \frac{1}{5}$$

Solution 29.

$$10^2 = 100$$

Solution 30.

$$2^{10} = 1024$$

Solution 31.

$$10^{-2} = \frac{1}{100}$$

Solution 32.

$$2^{-10} = \frac{1}{1024}$$

Solution 33.

$$(-10)^2 = -100$$

Solution 34.

$$(-2)^{10} = -1024$$

Solution 35.

$$(-10)^{-2} = -\frac{1}{100}$$

Solution 36.

$$(-2)^{-10} = -\frac{1}{1024}$$

Solution 37.

$$\log_2 10 = \frac{10}{3}$$

Solution 38.

$$\log_{10} 2 = \frac{3}{11}$$

1 ke.getRandomProblem(problem_type = 4)
```

Convert 9 oz to ounce.

Note: You may use the following table:

1 ounce = 28.35 gram

1 pound = 16 oz

1 kilo-gram = 2.205 pound

1 pound = 0.0005 short-ton

1 metric-ton = 1.12 short-ton

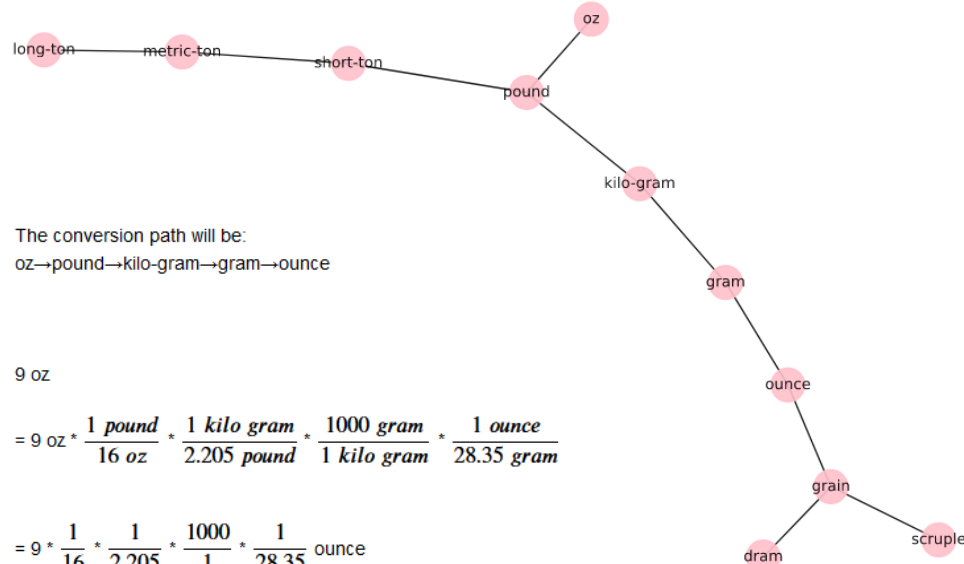

1 long-ton = 1.016 metric-ton

1 grain = 0.05 scruple

1 grain = 0.01667 dram

1 grain = 0.00208 ounce

1 kilo-gram = 1000 gram

The conversion path will be:

oz → pound → kilo-gram → gram → ounce

9 oz

$$= 9 \text{ oz} * \frac{1 \text{ pound}}{16 \text{ oz}} * \frac{1 \text{ kilo gram}}{2.205 \text{ pound}} * \frac{1000 \text{ gram}}{1 \text{ kilo gram}} * \frac{1 \text{ ounce}}{28.35 \text{ gram}}$$

$$= 9 * \frac{1}{16} * \frac{1}{2.205} * \frac{1000}{1} * \frac{1}{28.35} \text{ ounce}$$

$$= 9 * 0.9998120353373564 \text{ ounce}$$

$$= 8.998308318036207 \text{ ounce}$$

Numbers:

$$\frac{1}{2}, -\frac{2}{7}, \frac{6}{1}, \frac{1}{1}, \frac{1}{2}, -\frac{2}{1}$$

Common Denominators:

Let us make all denominators equal to their LCM = 14

$$= \frac{1 * 7}{2 * 7}, -\frac{2 * 2}{7 * 2}, \frac{6 * 14}{1 * 14}, \frac{1 * 14}{1 * 14}, \frac{1 * 7}{2 * 7}, -\frac{2 * 14}{1 * 14}$$

$$= \frac{7}{14}, -\frac{4}{14}, \frac{84}{14}, \frac{14}{14}, \frac{7}{14}, -\frac{28}{14}$$

Sum:

As we have common denom

$$= \frac{80}{14}$$

$$= \frac{80 / 2}{14 / 2}$$

$$= \frac{40}{7}$$

$$= \frac{40}{7}$$

Average:

Average of numbers

$$= \frac{40}{7}$$

$$= \frac{1}{6} * \frac{40}{7}$$

$$= \frac{20}{21}$$

Sorted Numbers:

$$-\frac{28}{14}, -\frac{4}{14}, \frac{7}{14}, \frac{7}{14}, \frac{14}{14}, \frac{84}{14}$$

$$= -\frac{2}{1}, -\frac{2}{7}, \frac{1}{2}, \frac{1}{2}, 1, 6$$

Median:

The number of fractions is 6, an even number.

The middle term is, $\frac{6+1}{2} = \frac{7}{2}$ th term.

Hence, the median will be average of 3rd and 4th terms.

Median

$$= \frac{\frac{1}{2} + \frac{1}{2}}{2}$$

$$= \frac{1}{2}$$

$$= \frac{1}{2}$$

20/21 = 13/14 (Avg)

1/2 = 7/14 (Med)

```
1 ke.getRandomProblem(problem_type = 7)
2
```

Marium has 7 farm. Each farm has 2 garden. Each garden has 60 tree. Each tree has 10 fruit cost of maintaining each tree is \$0.5. Answer the following questions:

1. What is the total number of farm?
2. What is the total number of garden?
3. What is the total number of tree?
4. What is the total number of fruit?
5. What is the total number of box?
6. What is the total sales value?
7. What is the total cost?
8. What is the net profit?

```
1 ke.printSolution()
```

The equation of the question are as follows:

1 Mary = 8 garden

1 garden = 20 tree

1 tree = 20 fruit

1 fruit = $\frac{1}{12}$ box

1 box = \$800/3 [sell price]

1 garden = \$200 [cost price]

Let us do calculations:

Total sales revenue

$$= 8 \text{ garden}$$

$$= 8 \text{ garden} * \frac{20 \text{ tree}}{\text{garden}} \quad \text{So, 160 tree}$$

$$= 8 \text{ garden} * \frac{20 \text{ tree}}{\text{garden}} * \frac{20 \text{ fruit}}{\text{tree}} \quad \text{So, 3200 fruit}$$

$$= 8 \text{ garden} * \frac{20 \text{ tree}}{\text{garden}} * \frac{20 \text{ fruit}}{\text{tree}} * \frac{\text{box}}{12 \text{ fruit}} \quad \text{So, 800/3 box}$$

$$= 8 \text{ garden} * \frac{20 \text{ tree}}{\text{garden}} * \frac{20 \text{ fruit}}{\text{tree}} * \frac{\text{box}}{12 \text{ fruit}} * \frac{\$8}{\text{box}}$$

$$= 8 * 20 * 20 * \frac{1}{12} * \$8$$

= \$6400/3

Cost

$$= \frac{\$200}{\text{garden}}$$

$$= \frac{\$200}{\text{garden}} * 8 \text{ garden}$$

$$= \$1600$$

Net Profit = Total Cost - Total Revenue

$$= \$6400/3 - \$1600$$

$$= \$1600/3$$

5. $z = 3 - 3i$

modulus of $z = r = |z| = \sqrt{(3)^2 + (-3)^2} = 4.24$

argument or phase of $z = \phi(z) = \tan^{-1}\left(\frac{-3}{3}\right) = \tan^{-1}\left(\frac{-3}{3}\right) = -0.785 = -45^\circ$

Now,

$$(3 - 3i)^4$$

$$= (re^{i(2n\pi + \phi)})^4$$

$$= r^4 e^{4(2n\pi + \phi)i}$$

$4(2n\pi + \phi)$ can be solved for $n = 0, 1, 2, 3, \dots$

The distinct values are:
 $\theta_0 = (2 * 0 * \pi + -45^\circ) * 4 = 180^\circ$

Expansio

$$\left(\frac{x}{3y} + xy\right)^4$$

Answer:

$$= x^4 y^4 + \frac{4x^4 y^2}{3} + \frac{2x^4}{3} + \frac{4x^4}{27y^2} + \frac{x^4}{81y^4} + \dots$$

Solution:

$$\left(\frac{x}{3y} + xy\right)^4$$

$$= \sum_{k=0}^4 \binom{4}{k} \left(\frac{x}{3y}\right)^{4-k} (xy)^k$$

$$= \binom{4}{0} \cdot \left(\frac{x}{3y}\right)^4 \cdot (xy)^0 + \binom{4}{1} \cdot \left(\frac{x}{3y}\right)^3 \cdot (xy)^1 + \binom{4}{2} \cdot \left(\frac{x}{3y}\right)^2 \cdot (xy)^2 + \dots$$

$$= 1 \cdot \frac{x^4}{81y^4} \cdot 1 + 4 \cdot \frac{x^3}{27y^3} \cdot xy + 6 \cdot \frac{x^2}{9y^2} \cdot x^2 y^2 + 4 \cdot \frac{x}{3y} \cdot x^3 y^3 + 1 \cdot x^4 y^4 + \dots$$

$$= \frac{x^4}{81y^4} + \frac{4x^4}{27y^2} + \frac{2x^4}{3} + \frac{4x^4 y^2}{3} + x^4 y^4 + \dots$$

$$= x^4 y^4 + \frac{4x^4 y^2}{3} + \frac{2x^4}{3} + \frac{4x^4}{27y^2} + \frac{x^4}{81y^4} + \dots$$

Write expression for arranging k items from a collection of n items

$$P_k^n$$

Note: P_k^n is read as n permutation k .

Answer:

$$\frac{n!}{(n-k)!}$$

Solution:

Arranging k out of n things.

As we start with n things and r places:

1. For first place, we can choose any item from n things, so we have n choices.
 2. For second place, we can choose any item from remainder $n - 1$ things, so we have $n - 1$ choices.
 3. For third place, we can choose any item from remainder $n - 2$ things, so we have $n - 2$ choices.
- Thus, for k th place, the choice will be $n - (k - 1) = n - k + 1$

Now, all choices are dependent on each other, so will get a product to get the result.

$$\Rightarrow P_k^n = n(n-1)(n-2) \dots (n-k+2)(n-k+1)$$

$$\Rightarrow P_k^n = \frac{n(n-1)(n-2) \dots (n-k+2)(n-k+1)(n-k)(n-k-1) \dots * 3 * 2 * 1}{(n-k)(n-k-1) \dots * 3 * 2 * 1}$$

$$\Rightarrow P_k^n = \frac{n!}{(n-k)!}$$

```
for i in range(1, n+1):

```

Find formula of $\cos(A - B)$ and $\sin(A - B)$

Answer:

$$\cos(A - B) = \sin(A) \sin(B) + \cos(A) \cos(B)$$

$$\sin(A - B) = \sin(A) \cos(B) - \sin(B) \cos(A)$$

Solution:

$$e^{i(A-B)} = e^{iA} e^{-iB}$$

$$\implies i \sin(A - B) + \cos(A - B) = (i \sin(A) + \cos(A)) (-i \sin(B) + \cos(B))$$

$$\implies i \sin(A - B) + \cos(A - B) = \sin(A) \sin(B) + i \sin(A) \cos(B) - \cos(A) \sin(B) + \cos(A) \cos(B)$$

Taking real terms of both sides:

$$\implies \cos(A - B) = \sin(A) \sin(B) + \cos(A) \cos(B)$$

Taking imaginary terms of both sides:

$$\implies \sin(A - B) = \sin(A) \cos(B) - \sin(B) \cos(A)$$

Prove

$$e^{i\theta} = \cos(\theta) + i \sin(\theta)$$

Answer:

$$e^{i\theta} = 1 + i\theta - \frac{\theta^2}{2} - \frac{i\theta^3}{6} + \frac{\theta^4}{24} + \frac{i\theta^5}{120} + O(\theta^6)$$

$$\cos(\theta) = 1 - \frac{\theta^2}{2} + \frac{\theta^4}{24} + O(\theta^6)$$

$$\sin(\theta) = \theta - \frac{\theta^3}{6} + \frac{\theta^5}{120} + O(\theta^6)$$

$$\implies e^{i\theta} = \cos(\theta) + i \sin(\theta)$$

Solution:

$$e^{i\theta} = 1 + i\theta - \frac{\theta^2}{2} - \frac{i\theta^3}{6} + \frac{\theta^4}{24} + \frac{i\theta^5}{120} + O(\theta^6)$$

$$\cos(\theta) = 1 - \frac{\theta^2}{2} + \frac{\theta^4}{24} + O(\theta^6)$$

$$\sin(\theta) = \theta - \frac{\theta^3}{6} + \frac{\theta^5}{120} + O(\theta^6)$$

$$\implies e^{i\theta} = \cos(\theta) + i \sin(\theta)$$

Find approximate value of the square root of 1030.

Is 733100 divisible by 7?

Answer:

False

Solution:

We will apply last digit reduction meth

The reduction factor for 7 is -2.

Step 1: Number = 733100

-2 times of the last digit of 733100

$$= -2 * 0 = 0$$

Remove the last digit from 733100

$$= 73310$$

Add 0 from 73310

$$= 73310 + 0 = 73310$$

Step 2: Number = 73310

-2 times of the last digit of 73310

$$= -2 * 0 = 0$$

Remove the last digit from 73310

$$= 7331$$

Add 0 from 7331

$$= 7331 + 0 = 7331$$

Step 3: Number = 7331

-2 times of the last digit of 7331

$$= -2 * 1 = -2$$

Remove the last digit from 7331

A circuit has resistances R_0, R_1, R_2, R_3 and R_4 in a series connected to a voltage source V . What

Answer:

$$R_0 + R_1 + R_2 + R_3 + R_4$$

Solution:

The total voltage is sum of voltages across each resistances in a series.

$$V = V_0 + V_1 + V_2 + V_3 + V_4$$

As the current through each of the resistance in a series must be same:

$$\Rightarrow IR = IR_0 + IR_1 + IR_2 + IR_3 + IR_4$$

$$\Rightarrow R = R_0 + R_1 + R_2 + R_3 + R_4$$

The capacitors with capacitances C_0 and C_1 are connected in a

Answer:

$$\left(\frac{1}{C_1} + \frac{1}{C_0}\right)V$$

Solution:

The total voltage on all capacitors connected in a series is the sum

$$V = V_0 + V_1$$

As the charge on each capacitor in a series is same:

$$\Rightarrow \frac{q}{C} = \frac{q}{C_1} + \frac{q}{C_0}$$

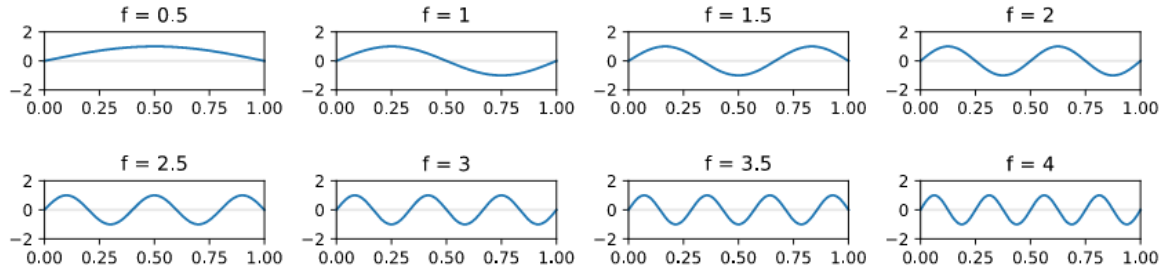

$$\Rightarrow \frac{1}{C} = \frac{1}{C_1} + \frac{1}{C_0}$$

$$\Rightarrow C = \frac{1}{\frac{1}{C_1} + \frac{1}{C_0}}$$

$$\Rightarrow q = CV = \left(\frac{1}{\frac{1}{C_1} + \frac{1}{C_0}}\right)V$$

Answer:

ors is given by

$$\cdot y(t) \cdot \hat{j} + z(t) \cdot \hat{k}$$

and acceleration $\vec{a}(t)$.

Answer:

$$\vec{v}(t) = \hat{i} \cdot \frac{d}{dt}x(t) + \hat{j} \cdot \frac{d}{dt}y(t) + \hat{k} \cdot \frac{d}{dt}z(t)$$

$$\vec{a}(t) = \hat{i} \cdot \frac{d^2}{dt^2}x(t) + \hat{j} \cdot \frac{d^2}{dt^2}y(t) + \hat{k} \cdot \frac{d^2}{dt^2}z(t)$$

Solution:

$$\vec{r}(t) = x(t) \cdot \hat{i} + y(t) \cdot \hat{j} + z(t) \cdot \hat{k}$$

$$\Rightarrow \vec{v}(t) = \frac{d}{dt}\vec{r}(t)$$

$$= \frac{\partial}{\partial t}(x(t) \cdot \hat{i} + y(t) \cdot \hat{j} + z(t) \cdot \hat{k})$$

$$= \hat{i} \cdot \frac{d}{dt}x(t) + \hat{j} \cdot \frac{d}{dt}y(t) + \hat{k} \cdot \frac{d}{dt}z(t)$$

$$\Rightarrow \vec{a}(t) = \frac{d}{dt}\vec{v}(t)$$

$$= \frac{\partial}{\partial t}\left(\hat{i} \cdot \frac{d}{dt}x(t) + \hat{j} \cdot \frac{d}{dt}y(t) + \hat{k} \cdot \frac{d}{dt}z(t)\right)$$

$$= \hat{i} \cdot \frac{d^2}{dt^2}x(t) + \hat{j} \cdot \frac{d^2}{dt^2}y(t) + \hat{k} \cdot \frac{d^2}{dt^2}z(t)$$

The potential energy due to two

$$[\vec{U}_{ij}] = \frac{1}{4\pi\epsilon_0} \frac{q_i q_j}{|\vec{r}_i - \vec{r}_j|}$$

The net potential energy of the s

1. the sum of potential energy, \vec{U}
2. the sum of potential energy of

$$\vec{U} = \vec{U}_{ext0} + \vec{U}_{ext1} + \vec{U}_{01}$$

$$= q_0 V(\vec{r}_0) + q_1 V(\vec{r}_1)$$

$$+ \frac{1}{4\pi\epsilon_0} \frac{q_0 q_1}{|\vec{r}_0 - \vec{r}_1|}$$

$$= q_0 V(\vec{r}_0) + q_1 V(\vec{r}_1)$$

$$+ \frac{1}{4\pi\epsilon_0} \left(\frac{q_0 q_1}{|\vec{r}_0 - \vec{r}_1|}\right)$$

info@xcelvations.com

A series of springs in a series with s

Answer:

$$\frac{1}{\frac{1}{k_1} + \frac{1}{k_0}}$$

Solution:

The total displacement is sum of dis

$$x = x_0 + x_1$$

As the force through each of the spi

$$\Rightarrow \frac{F}{k} = \frac{F}{k_1} + \frac{F}{k_0}$$

$$\Rightarrow \frac{1}{k} = \frac{1}{k_1} + \frac{1}{k_0}$$

$$\Rightarrow k = \frac{1}{\frac{1}{k_1} + \frac{1}{k_0}}$$

PROBLEM TEMPLATE: `_problem_length`

If sticks of lengths l_0, l_1, l_2, l_3 and l_4 are joined together, what is the resultant length?

```
ke.printAnswer()
```

$$\vec{l} = \vec{l}_0 + \vec{l}_1 + \vec{l}_2 + \vec{l}_3 + \vec{l}_4$$

```
ke.printSolution()
```

Assuming that the sticks are joined in a straight line, the resultant length when sticks of lengths l_0, l_1, l_2, l_3 and

$$l = l_0 + l_1 + l_2 + l_3 + l_4$$

If they are not joined in a straight line, the resultant length will be a vector value:

$$\vec{l} = \vec{l}_0 + \vec{l}_1 + \vec{l}_2 + \vec{l}_3 + \vec{l}_4$$

In absence of any information, the second result is more appropriate.

M4. The motors of a rocket launched from the Earth are used only near the Earth in order to give the rocket just velocity of the rocket is a minimum and calculate the speed with which it hits the Moon's surface (the motion of

	Mass /kg	Radius /km
Earth	6.0×10^{24}	6.4×10^3
Moon	7.3×10^{22}	1.7×10^3

Earth-Moon distance = 3.8×10^5 km.

Answer:

M4. 3.4×10^5 km from centre of Earth; 2.4 km s^{-1} .

Find the heat required to convert 100 °C steam to 150 °C steam

$$q = mc\Delta T$$

$$q = (25 \text{ g}) \times (2.09 \text{ J/g}\cdot^\circ\text{C}) \times [(150^\circ\text{C} - 100^\circ\text{C})]$$

$$q = (25 \text{ g}) \times (2.09 \text{ J/g}\cdot^\circ\text{C}) \times (50^\circ\text{C})$$

$$q = 2612.5 \text{ J}$$

The heat required to convert 100 °C steam to 150 °C steam = 2612.5

Step 6:

Find total heat energy. In this final step, put together all of the answers from the previous calculations

$$\text{HeatTotal} = \text{HeatStep 1} + \text{HeatStep 2} + \text{HeatStep 3} + \text{HeatStep 4} + \text{HeatStep 5}$$

$$\text{HeatTotal} = 522.5 \text{ J} + 8350 \text{ J} + 10450 \text{ J} + 56425 \text{ J} + 2612.5 \text{ J}$$

$$\text{HeatTotal} = 78360 \text{ J}$$

Answer:

The heat required to convert 25 grams of -10 °C ice into 150 °C steam is 78360 J or 78.36 kJ.

Express f as a function of v, u

f = Focal length of mirror

u = Distance of object from mirror

v = Distance of image from mirror

Use constant = 1

```
ke.printAnswer()
```

$$\frac{1}{f} \propto \frac{u+v}{uv}$$

$$\Rightarrow \frac{1}{f} = \frac{1}{v} + \frac{1}{u}$$

```
ke.printSolution()
```

Let:

f = Focal length of mirror

u = Distance of object from mirror

v = Distance of image from mirror

The relation between variables:

$$\vec{E} = \frac{1}{4\pi\epsilon_0} \frac{q}{r^2} \hat{r}$$

$$\Rightarrow \oint_C \vec{E} \cdot d\vec{S} = \frac{1}{4\pi\epsilon_0} \frac{q}{r^2} \hat{r} \cdot 4\pi r^2$$

$$\Rightarrow \oint_C \vec{E} \cdot d\vec{S} = \frac{q}{\epsilon_0}$$

$$a = \frac{d}{dt}v \Rightarrow \int_{v_0}^v 1 dv = \int_{t_0}^t a dt \Rightarrow v - v_0 = \int_{t_0}^t a dt$$

$$\Rightarrow \frac{d}{dt}s = v_0 + \int_{t_0}^t a dt \Rightarrow \int_{s_0}^s 1 ds = \int_{t_0}^t \left(v_0 + \int_{t_0}^t a dt \right) dt$$

$$a = \frac{d}{dt}v \Rightarrow a = \frac{d}{dt}s \frac{d}{ds}v \Rightarrow a = v \frac{d}{ds}v \Rightarrow \int_{s_0}^s a ds = \int_{v_0}^v v dv$$

$$p = mv = m \frac{d}{dt}s$$

$$\Rightarrow \frac{d}{dt}s = v_0 + \int_{t_0}^t a dt \Rightarrow \int_{s_0}^s 1 ds = \int_{t_0}^t \left(v_0 + \int_{t_0}^t a dt \right) dt$$

$$a = \frac{d}{dt}v \Rightarrow a = \frac{d}{dt}s \frac{d}{ds}v \Rightarrow a = v \frac{d}{ds}v \Rightarrow \int_{s_0}^s a ds = \int_{v_0}^v v dv$$

$$p = mv = m \frac{d}{dt}s$$

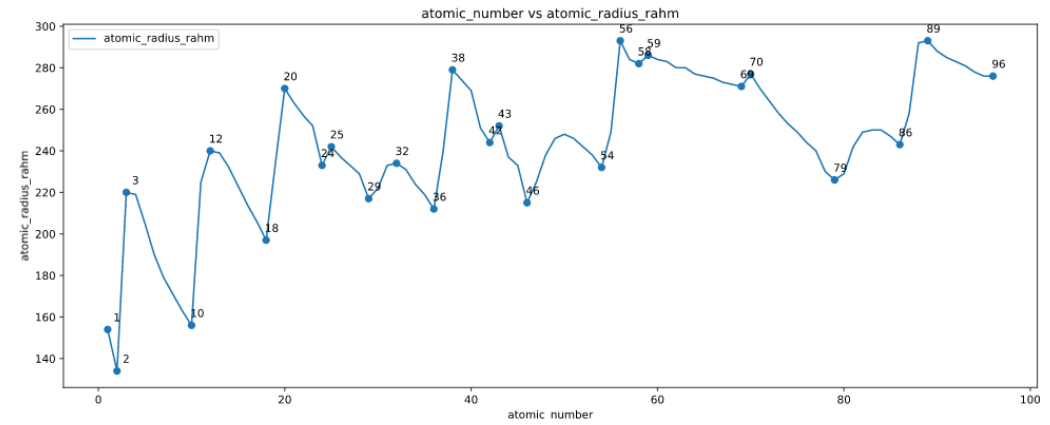

$$F = ma = m \frac{d}{dt}v = m \frac{d^2}{dt^2}s$$

$$W = Fs$$

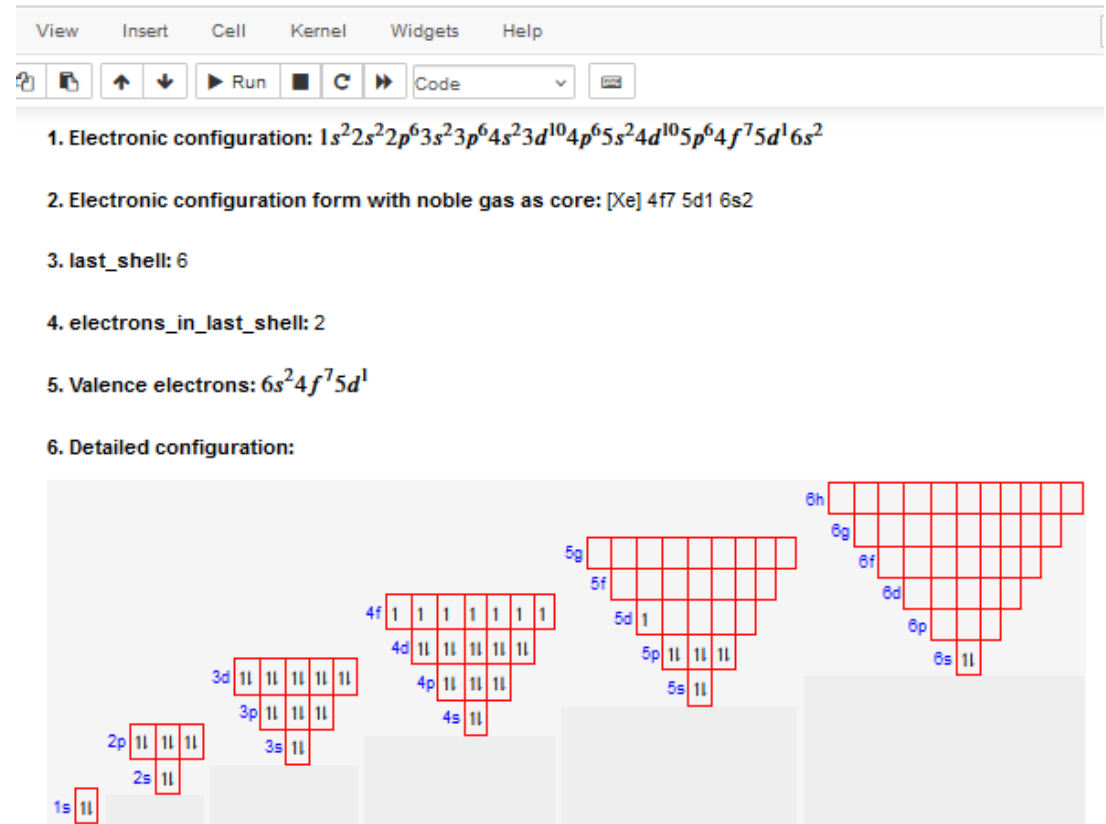

Chemistry has been in-depth and fun

He uses periodic table plotting to enhance his understanding of elements and their properties

He knows atoms, their structures, electronic configurations, possible bonds and much more

- He can not only write the electronic configuration as shown but also interpret them to predict possible bonds.
- He is also well versed in all topics of high school chemistry and has already covered almost everything of AP Chemistry.

The screenshot shows a Jupyter Notebook interface with a menu bar (View, Insert, Cell, Kernel, Widgets, Help) and a toolbar with icons for search, refresh, up/down arrows, Run, and Code. The code cell contains the following text:

1. Electronic configuration: $1s^2 2s^2 2p^6 3s^2 3p^6 4s^2 3d^{10} 4p^6 5s^2 4d^{10} 5p^6 4f^7 5d^1 6s^2$
2. Electronic configuration form with noble gas as core: $[Xe] 4f^7 5d^1 6s^2$
3. last_shell: 6
4. electrons_in_last_shell: 2
5. Valence electrons: $6s^2 4f^7 5d^1$
6. Detailed configuration:

Below the code cell is a detailed orbital diagram for Xenon. It shows the filling of orbitals from 1s to 6s, with the following occupancy: 1s (2), 2s (2), 2p (6), 3s (2), 3p (6), 4s (2), 3d (10), 4p (6), 5s (2), 4d (10), 5p (6), 6s (2), 4f (7), and 5d (1). The orbitals are arranged in a staircase pattern, with the 4f and 5d orbitals being partially filled.

How can elements with atomic numbers 3 and 83 form compounds?

1 ke.printAnswer()

```

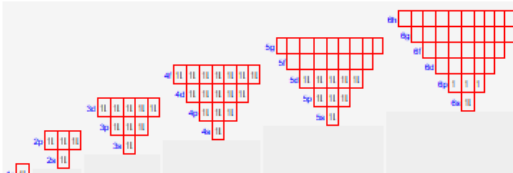

Li₃Bi

Lithium (Li, 3):
 Electronic configuration : $1s^2 2s^1$
 Valence electrons (1) : $2s^1$
 Electrons in the last shell: 1

As the valence electrons in the last shell of Li are 1, the best possible choice for this atom is to lose 1 electron.

Bismuth (Bi, 83):
 Electronic configuration : $1s^2 2s^2 2p^6 3s^2 3p^4 3d^{10} 4p^6 5s^2 4d^{10} 5p^6 4f^{14} 5d^{10} 6s^2 6p^3$
 Valence electrons (5) : $6s^2 4f^{14} 5d^{10} 6p^3$
 Electrons in the last shell: 5

For Bi, with 3 unpaired electrons in the last shell, the best possible choice is to share or gain 3 electrons. It can do share or gain in pairs too.

Likely Compounds:
 For Bi, with 3 unpaired electrons in the last shell, the best possible choice is to share or gain 3 electrons. It can do share or gain in pairs too.
 As the valence electrons in the last shell of Li are 1, the best possible choice for this atom is to lose 1 electron.

Likely Compounds:
 For Bi, with 3 unpaired electrons in the last shell, the best possible choice is to share or gain 3 electrons. It can do share or gain in pairs too.
 As the valence electrons in the last shell of Li are 1, the best possible choice for this atom is to lose 1 electron.

Chemical formula: Li_3Bi

$3 Li + Bi \xrightarrow{\text{By electron transfer}} Li_3Bi$

$3 \cdot 1 = 3 Li \xrightarrow{\text{electrons transferred to}} 1 \cdot 3 = 3 Bi$

See the links for more information.

First Ionization Energies:

9	H-H	hydrogen	104.0	426	4.52	H	Strong, nonpolarizable bond
9	H-F	hydrogen fluoride	126.0	569	5.90	H,F	Very strong
10	C-H	in water	119.0	427	5.15	C,H	Very strong, hydroxyl radical reactive with almost all organics exothermically by H atom abstraction
11	C-H	in methanol	105.0	440	4.56	C,H	Slightly stronger than C-H bonds
12	C-H	in aliphosphor (an endocyclic)	77.0	223	2.22	C,H	C-H bond strength depends strongly on substituent on C
13	C=O	carbon monoxide	287.0	1077	11.16	C,O	Strongest bond in neutral molecule
14	C=O	carbon dioxide	127.0	532	5.51	C,O	Slightly stronger than C-H bonds, surprisingly low due to stability of CO
15	C=O	formaldehyde	172.0	745	7.75	C,O,H	Much stronger than C-H bonds
16	C=O	oxygen	119.0	426	5.15	O	Stronger than single bonds, weaker than many other double bonds
17	N-H	nitrogen	226.0	945	9.79	N	One of the strongest bonds, large activation energy in production of ammonia

Note:

Bond energy kcal per mol: Bond-dissociation energy at 298K (kcal/mol)
 Bond energy kJ per mol: Bond-dissociation energy at 298K (kJ/mol)
 Bond energy eV per bond: Bond-dissociation energy at 298K (eV/bond)

Molecule	hydrogen	fluorine	oxygen	chlorine
bond energy kcal per mol	104.0	21.0	119.0	58.0
bond energy kJ per mol	426	157	426	242
bond energy eV per bond	4.52	1.62	5.15	2.51
elementary	H	F	O	Cl
Comment	Strong, nonpolarizable bond	Very weak, in conjunction with strong C-F and H-F bonds, leads to an explosive reaction with hydrocarbons	Stronger than single bonds, weaker than many other double bonds	Indicated by facility of photochemical chlorinations

+91 75699 33343 info@xcelvations.com

What is the name of this complex ion $[CrCl_2(H_2O)_4]^{2+}$

Answer: tetraaquadichlorochromium(III) ion

Solution: **ligands:** Cl chloro, H₂O aqua

In alphabetical order: aqua chloro
 There are 4 aqua and 2 chloro ligands and both are tetra aqua di chloro

metal: metal: Cr
 Oxidation number of H₂O = 0. Hence, $x + 2(-1) + 0 = 1 \Rightarrow x = +3$
 Therefore, oxidation Number of Cr = +3. It will be called chromium(III)

name of molecule: tetra aqua di chloro chromium(III) ion, tetraaquadichlorochromium(III) ion.

Solution:

complex compound: ammine tetra aqua chromium (II) sulfate

anion: sulfate = SO_4^{2-}

complex ion: ammine tetra aqua chromium (II)

ligands: ammine: NH_3 , tetra aqua: $(H_2O)_4$

metal: chromium(II): Cr(II)

Oxidation number of $NH_3 = 0$,
 Oxidation number of $H_2O = 0$,
 Oxidation number of $Cr(II) = +2$.

Hence, charge on ion: $0 + 0 + 2 = +2$

chemical formula of complex ion: $[Cr(H_2O)_4(NH_3)]^{2+}$, $[Cr(NH_3)(H_2O)_4]^{2+}$

chemical formula of molecule: $[Cr(H_2O)_4(NH_3)]SO_4$, $[Cr(NH_3)(H_2O)_4]SO_4$

According to the Lewis definition, an acid is any species which can accept a lone pair of electrons, and a base is any species which can donate a lone pair of

In the first reaction ZnO accepts a pair of electrons from NaOH.

In the second reaction H₂SO₄ accepts a pair of electrons from ZnO.

If a molecule/ion behaves both like a Lewis acid and a Lewis base, it is called amphoteric molecule/ion.

ZnO acts both like a Lewis acid and a Lewis base.

An amphoteric molecule is slightly different. It is a molecule that can both accept or donate a proton, making it an acid as well as a base according to Bronsted and base.

All amphoteric molecules are amphoteric molecules. But some of the amphoteric molecules may not be amphoteric molecules as they may accept a pair of protons.

Answer:
 Reactant
 Ti = 47.867 gram

Reactant
 N₂ = 14.007 gram

Product
 TiN = 61.874 gram

Solution:
 We have,

All calculations are based on standard mass of elements and particles.

$$\text{Ti} = 47.867$$

$$\rightarrow 2 \cdot \text{Ti} = 2 \cdot (47.867) = 2 \cdot 47.867 = 95.734$$

$$\text{N}_2 = 2 \cdot 14.007 = 28.014$$

$$\text{Ti} = 47.867$$

$$\text{N} = 14.007$$

$$\rightarrow 2 \cdot \text{TiN} = 2 \cdot (47.867 + 14.007) = 2 \cdot 61.874 = 123.748$$

Now, let us create a table with data calculated above.

Particulars	Reactant Ti	Reactant N ₂	Product TiN
moles (a)	2	1	2
standard mass in gram (b)	95.734	28.014	123.748
given mass in gram (c)			61.874
ratio of given mass and standard mass (d = d/b)			$\frac{61.874}{123.748} = 0.5$
calculated mass in gram (e = d · b)	$0.5 \cdot 95.734 = 47.867$	$0.5 \cdot 28.014 = 14.007$	$0.5 \cdot 123.748 = 61.874$

Problem Template: *_problem_nth_order_rate_of_reaction*
 Find the equation of concentration and expression of half-life of a reaction c

Answer:

$$C = \frac{4C_0}{\left(C_0^{\frac{1}{2}}kt + 2\right)^2}$$

$$T_{\frac{1}{2}} = \frac{2(-1 + 2^{\frac{1}{2}})}{C_0^{\frac{1}{2}}k}$$

Solution:
 Let concentration of reactant is C.

For $\frac{3}{2}$ th order reaction:

$$\text{Rate} = k \cdot C^{\frac{3}{2}} \quad \dots \text{(i)}$$

$$\rightarrow -\frac{d}{dt}C = k \cdot C^{\frac{3}{2}}$$

$$\rightarrow -\frac{1}{C^{\frac{3}{2}}}dC = kdt$$

$$\rightarrow \frac{1}{C^{\frac{3}{2}}}dC = -kdt$$

If the concentration changes from C₀ to C in time 0 to t.

$$\rightarrow \int_{C_0}^C \frac{1}{C^{\frac{3}{2}}}dC = -k \cdot \int_0^t 1 dt \quad \dots \text{(ii)}$$

$$\rightarrow \left[-\frac{2}{C^{\frac{1}{2}}} \right]_C^{C_0} = -k \cdot [t]_0^t$$

$$\rightarrow \frac{2}{C_0^{\frac{1}{2}}} - \frac{2}{C^{\frac{1}{2}}} = -kt$$

$$\rightarrow C = \frac{4C_0}{\left(C_0^{\frac{1}{2}}kt + 2\right)^2} \quad \dots \text{(iii)}$$

If the concentration changes from C₀ to its half, $\frac{C_0}{2}$, in time 0 to T_{1/2}, called

$$\rightarrow \int_{\frac{C_0}{2}}^{C_0} \frac{1}{C^{\frac{3}{2}}}dC = -k \cdot \int_0^{T_{\frac{1}{2}}} 1 dt \quad \dots \text{(iv)}$$

Problem Template: *_problem_propos_of_rate_of_reaction*
 Find the order and dimension of the rate constant for the reaction given below:

$$\text{Rate of reaction} = k[\text{Mg}]^{\frac{3}{2}}[\text{N}_2]^2$$

Answer:

$$\text{Order of reaction} = \frac{3}{2} + 2 = \frac{7}{2}$$

$$\text{Dimension (k)} = \text{Dimension} \left(\frac{(\text{length})^{\frac{3}{2}}}{\text{amount of substance}^{\frac{7}{2}} \cdot \text{time}} \right)$$

Solution:

Order of reaction is sum of exponents of concentrations in the rate equation.

$$\text{Rate of reaction} = k[\text{Mg}]^{\frac{3}{2}}[\text{N}_2]^2 \quad \dots \text{(i)}$$

$$\text{Order of reaction} = \frac{3}{2} + 2 = \frac{7}{2} \quad \dots \text{(ii)}$$

$$\text{The unit of concentration} = \frac{\text{mol}}{\text{liter}}$$

$$\text{The unit of rate of change in concentration} = \frac{\text{unit of concentration}}{\text{s}} = \frac{\frac{\text{mol}}{\text{liter}}}{\text{s}} = \frac{\text{mol}}{\text{liter} \cdot \text{s}}$$

Therefore from (i),

$$\text{Rate of reaction} = k[\text{Mg}]^{\frac{3}{2}}[\text{N}_2]^2$$

$$\text{Unit (Rate of reaction)} = k \left(\frac{\text{mol}}{\text{liter}} \right)^{\frac{3}{2}} \left(\frac{\text{mol}}{\text{liter}} \right)^2$$

$$= \frac{k \cdot \text{mol}^{\frac{7}{2}}}{\text{liter}^{\frac{7}{2}}}$$

$$\rightarrow \frac{\text{mol}}{\text{liter} \cdot \text{s}} = \frac{k \cdot \text{mol}^{\frac{7}{2}}}{\text{liter}^{\frac{7}{2}}}$$

$$\rightarrow k = \frac{\text{liter}^{\frac{7}{2}}}{\text{mol}^{\frac{7}{2}} \cdot \text{s}}$$

Converting it into dimension:

$$\text{Dimension (k)} = \text{Dimension} \left(\frac{(\text{length}^3)^{\frac{7}{2}}}{\text{time}} \right) \quad \dots \text{(iii)}$$

$$PV = nRT \\ \rightarrow P = \frac{n}{V}RT = CRT \quad \text{where C is concentration} \\ \rightarrow P = CRT \quad \dots \text{(i)}$$

Now, let us create a table of data required for equilibrium

Particulars	Reactant F
Initial moles	1
Equilibrium moles (let its conversion factor.)	1 - α
Initial partial pressures (assumed)	P
Equilibrium partial pressures	P(1 - α)
Concentration symbols	[F]
Concentration as function of moles and volume	$\frac{1 - \alpha}{V}$
Pressure as function of concentration, R and T using (i)	[F]RT

Therefore,

$$K_c = \frac{[\text{F}^-]}{[\text{F}] [\text{e}^-]}$$

$$= \frac{\frac{\alpha}{V}}{\frac{1-\alpha}{V} \cdot \frac{1-\alpha}{V}}$$

$$K_p = \frac{P_{\text{F}^-}}{P_{\text{F}} P_{\text{e}^-}}$$

$$= \frac{P_{\alpha}}{P(1-\alpha) \cdot P(1-\alpha)}$$

$$= \frac{RT [\text{F}^-]}{RT [\text{F}] \cdot RT [\text{e}^-]}$$

 N_2 $1s^2 2s^2 2p^3$
 $\text{N} \equiv \text{N}$
 $\text{P}_x - \text{P}_x$ σ bond
 $\text{P}_y - \text{P}_y$ π bond
 $\text{P}_z - \text{P}_z$ π bond

Oxidation Number
 atom ion
 $\text{H} \rightarrow \text{H}^+ + e^-$
 $\text{Cl} + e^- \rightarrow \text{Cl}^-$
 SO_4^{--} H^+
 CO_3^{--} Na^+
 NO_3^- Ca^{+2}
 ions are charged particles (one or more atoms)

Oxidation \rightarrow React with Oxygen
 $\text{Ca} + \text{O} \rightarrow \text{CaO}$
 $1s^2 2s^2 2p^6$ $1s^2 2s^2 2p^3$
 $4s^2$ $2s^2$
 The charge on atom is its oxidation number.

$\text{Ca} + \text{O} \rightarrow \text{Ca}^{+2} \text{O}^{-2}$
 Oxidation number: 0, 0, +2, -2
 Oxidation of Calcium: oxidation number increases
 Reduction of Oxygen: Ox. No. decreases
 $\text{Ca} + \text{H}_2(\text{SO}_4) \rightarrow \text{CaSO}_4 + \text{H}_2$
 O.N. increased
 Ca is oxidized
 Hydrogen reduced

SAT English is tough but we made lot of progress.

We did sample papers, read prose, poetry and articles.

Learning English has been comprehensive

- We focused on vocabulary, pronunciation, reading poetry, and articles, and doing SAT test papers.
- The focus is on analytical learning, which is required for modern English tests.

rigor, riggers, rigors

... endeavours to help forward the happiness of all other persons; for there never was any man such a morose and severe pursuer of virtue, such an enemy to pleasure, that though he set hard rules for men to undergo, much pain, many watchings, and other **rigors**, yet did not at the same time advise them to do all they could in order to relieve and ease the miserable, and who did not represent gentleness and good-nature as amiable dispositions. and from thence they infer that if a man ought to advance ... [trimmed chars by brute force] - **Utopia**

It was not till late next day that I spoke to Mrs. Grose: the **rigor** with which I kept my pupils in sight making it often difficult to meet her privately, and the more as we each felt the importance of not provoking-on the part of the servants quite as much as on that of the children-any suspicion of a secret flurry or that of a discussion of mysteries. I drew a great security in this particular from her mere smooth aspect. ... - **The Turn Of The Screw By Henry James**

Ham carrying me on his back and a small box of ours under his arm, and Peggotty carrying another small box of ours, we turned down lanes bestrewn with bits of chips and little hillocks of sand, and went past gas-works, rope-walks, boat-builders' yards, shipwrights' yards, ship-breakers' yards, caulkers' yards, **riggers'** lofts, smiths' forges, and a great litter of such places, until we came out upon the dull waste I had already seen at a distance; when Ham said, - **David Copperfield By Charles Dickens**

Solution:  
Homonym word: **shower**

The boys **shower** in the morning.  
Tomorrow will be cloudy with showers.

... The ladies voluntarily permitted the gentlemen to review their legs. If I were in command, I would not permit the ladies to raise an umbrella under the "para para" of a **shower**. Their hastening figures are so fascinating. - **The American Diary Of A Japanese Girl By Yoné Noguchi**

The **shower** stopped. The pavements were glossed like a looking-glass. ... - **The American Diary Of A Japanese Girl By Yoné Noguchi**

... Condescend to enter!" I **showered** my wooden-dogged greeting over Ada. - **The American Diary Of A Japanese Girl By Yoné Noguchi**

Fill in the blanks with similes made of words, **sweet, stiff, honey and poker**.

"So you won't be my friend?" she said, smiling as \_\_\_\_\_, and creeping close up. - **Wuthering Heights By Emily Brontë**

... "We ought to rehearse tonight. Come here, Amy, and do the fainting scene, for you are as \_\_\_\_\_ in that." - **Little Women By Louisa May Alcott**

Answer:  
sweet as honey, stiff as a poker

Solution:  
as stiff as a poker (a post, a board)  
as sweet as honey (sugar)

"So you won't be my friend?" she said, smiling as **sweet as honey**, and creeping close up. - **Wuthering Heights By Emily Brontë**

... "We ought to rehearse tonight. Come here, Amy, and do the fainting scene, for you are as **stiff as a poker** in that." - **Little Women By Louisa May Alcott**

Solution:  
herd of elephants  
flock of goats

'Maria didn't need to be told. She grabbed the BIDON and went clattering down the stairs like a **herd of elephants** and in three minutes she was back with two pounds of bread under one arm and a half-litre bottle of wine under the other. I didn't stop to thank her; I just seized the bread and sank my teeth in it. ... - **Down And Out In Paris And London**

... t is true, as it is, they may all say what they like; though, to tell the truth, if the coral beads and the suit had not come i would not have believed it either; for in this village everybody thinks my husband a numskull, and except for governing a **flock of goats**, they cannot fancy what sort of government he can be fit for. god grant it, and direct him according as he sees his children stand in need of it. i am resolved with your worship's leave, lady of my soul, to make the most of this fair d ... [trimmed chars by brute force] - **Don Quixote By Miguel De Cervantes Saavedra**

## Fill in the blanks with antonyms of the word 'junior'.

Solution:

The antonyms of junior: **lead, senior, experiences, old**

... It was, in a new form, the **old, old** trouble that eats the heart out of every civilization: snobbery, the desire for possessions, creditable appendages; and it is to escape this rather than the lusts of the flesh that saints retreat into the Himalayas. ... - **A Passage To India By E M Forster**

... He wanted to avenge Miss Quested and punish Fielding, while remaining scrupulously fair. He wanted to flog every native that he saw, but to do nothing that would **lead** to a riot or to the necessity for military intervention. The dread of having to call in the troops was vivid to him; soldiers put one thing straight, but leave a dozen others crooked, and they love to humiliate the civilian administration. ... - **A Passage To India By E M Forster**

"No more do I. My **experiences** here have cured me. But I want others to want it." - **A Passage To India By E M Forster**

... And trying not to sound patronizing, he stretched his hand over the table, and said: "We shall all have to hang together, **old** man, I'm afraid. I'm your junior in years, I know, but very much your **senior** in service; you don't happen to know this poisonous country as well as I do, and you must take it from me that the general situation is going to be nasty at Chandrapore during the next few weeks, very nasty indeed." - **A Passage To India By E M Forster**

Fill in the blanks with synonyms of the word 'faith'.

"I \_\_\_\_\_," said Mr. Lorry, after another pause of feeble sympathy and humility, "that you accompany Miss Manette to France?" - **A Tale Of Two Cities**

ne of the first considerations which arose in the business mind of Mr. Lorry when business hours came round, was this:-that he had no right to imperil Tellson's by sheltering the wife of an emigrant prisoner under the Bank roof, His own possessions, safety, life, he would have hazarded for Lucie and her child, without a moment's demur; but the great \_\_\_\_\_ he held was not his own, and as to that business charge he was a strict man of business. - **A Tale Of Two Cities**

... They were even boastful of its eminence in those particulars, and were fired by an express conviction that, if it were less objectionable, it would be less respectable. This was no passive \_\_\_\_\_, but an active weapon which they flashed at more convenient places of business. Tellson's (they said) wanted no elbow-room, Tellson's wanted no light, Tellson's wanted no embellishment. ... - **A Tale Of Two Cities**

Mr. Cruncher, in an access of \_\_\_\_\_, growlingly repeated the words after Miss Pross, like somebody at church. - **A Tale Of Two Cities**

Answer:

belief, hope, loyalty, trust

Solution:

The synonyms of faith: **belief, hope, loyalty, trust**

"I **hope**," said Mr. Lorry, after another pause of feeble sympathy and humility, "that you accompany Miss Manette to France?" - **A Tale Of Two Cities**

ne of the first considerations which arose in the business mind of Mr. Lorry when business hours came round, was this:-that he had no right to imperil Tellson's by sheltering the wife of an emigrant prisoner under the Bank roof, His own possessions, safety, life, he would have hazarded for Lucie and her child, without a moment's demur; but the great **trust** he held was not his own, and as to that business charge he was a strict man of business. - **A Tale Of Two Cities**

... They were even boastful of its eminence in those particulars, and were fired by an express conviction that, if it were less objectionable, it would be less respectable. ## Comprehension Text:

Read the following article and answer the questions.  
[The Real Story of the Pied Piper](#)

## Question:

- How people remember lost children even today in Bungelosenstrasse?
- Hamelin was situated in which modern country?
- What really happened to the children?
- Is this story a complete fable?
- Was the pied piper a vengeful person?
- Which part of the story was an afterthought, rats or children?
- What is meaning of 'Bungelosenstrasse'?
- What was the real name of the Pied Piper of Hamelin?
- Which children survived the piper's revenge?

```
ke.printAnswer()
```

- According to the story, the children were last seen on one particular street in Hamelin. That street is now known. To this day, no one is allowed to dance or play music on this street.
- Hamelin was a German town.
- Historians don't know what happened to the children. The stained glass window that was once in the Hamelin town with the town's children, but it does not provide details. There are several possibilities: 1. In the year of 1284 piper, clothed in many kinds of colors, 130 children born in Hamelin were seduced and lost at the place of rats prior to the disappearance of the children. 3. Some experts link the loss of the Hamelin children to another

# Comprehension to improve English and analytical ability in other subjects

Two roads diverged in a yellow wood,  
And sorry I could not travel both  
And be one traveler, long I stood  
And looked down one as far as I could  
To where it bent in the undergrowth;

Then took the other, as just as fair,  
And having perhaps the better claim,  
Because it was grassy and wanted wear;  
Though as for that the passing there  
Had worn them really about the same,

And both that morning equally lay  
In leaves no step had trodden black.  
Oh, I kept the first for another day!  
Yet knowing how way leads on to way,  
I doubted if I should ever come back.

I shall be telling this with a sigh  
Somewhere ages and ages hence:  
Two roads diverged in a wood, and I—  
I took the one less traveled by,  
And that has made all the difference.

3

Following the principles of community-based participatory research, tribal nations and research institutions are equal partners in health studies conducted on reservations. A collaboration between the Crow Tribe and Montana State University \_\_\_\_\_ this model: tribal citizens worked alongside scientists to design the methodology and continue to assist in data collection.

Which choice completes the text with the most logical and precise word or phrase?

- A) circumvents
- B) eclipses
- C) fabricates
- D) exemplifies

4

The parasitic dodder plant increases its reproductive success by flowering at the same time as the host plant it has latched onto. In 2020, Jianqiang Wu and his colleagues determined that the tiny dodder achieves this \_\_\_\_\_ with its host by absorbing and utilizing a protein the host produces when it is about to flower.

Which choice completes the text with the most logical and precise word or phrase?

- A) synchronization
- B) hibernation
- C) prediction
- D) moderation

5

Given that the conditions in binary star systems should make planetary formation nearly impossible, it's not surprising that the existence of planets in such systems has lacked \_\_\_\_\_ explanation. Roman Rafikov and Kedron Silsbee shed light on the subject when they used modeling to determine a complex set of factors that could support planets' development.

Which choice completes the text with the most logical and precise word or phrase?

- A) a discernible
- B) a straightforward
- C) an inconclusive
- D) an unbiased

6

Seminole/Muscogee director Sterlin Harjo \_\_\_\_\_ television's tendency to situate Native characters in the distant past: this rejection is evident in his series *Reservation Dogs*, which revolves around teenagers who dress in contemporary styles and whose dialogue is laced with current slang.

Which choice completes the text with the most logical and precise word or phrase?

- A) repudiates
- B) proclaims
- C) foretells
- D) recants

16

In the mountains of Brazil, *Barbacenia tomentosa* and *Barbacenia macrantha*—two plants in the Velloziaceae family—establish themselves on soilless, nutrient-poor patches of quartzite rock. Plant ecologists Anna Abrahão and Patricia de Britto Costa used microscopic analysis to determine that the roots of *B. tomentosa* and *B. macrantha*, which grow directly into the quartzite, have clusters of fine hairs near the root tip; further analysis indicated that these hairs secrete both malic and citric acids. The researchers hypothesize that the plants depend on dissolving underlying rock with these acids, as the process not only creates channels for continued growth but also releases phosphates that provide the vital nutrient phosphorus.

Which finding, if true, would most directly support the researchers' hypothesis?

- A) Other species in the Velloziaceae family are found in terrains with more soil but have root structures similar to those of *B. tomentosa* and *B. macrantha*.
- B) Though *B. tomentosa* and *B. macrantha* both secrete citric and malic acids, each species produces the acids in different proportions.
- C) The roots of *B. tomentosa* and *B. macrantha* carve new entry points into rocks even when cracks in the surface are readily available.
- D) *B. tomentosa* and *B. macrantha* thrive even when transferred to the surfaces of rocks that do not contain phosphates.

We create notes while teaching. In next few slides, we present a sample of some notes used by him.

- Forces:**
- 1) Bond force
  - 2) Near nuclear force
  - 3) EM force
  - 4) Gravitational force (May not be force) (we are searching for gravitons)

Why do atoms form molecules?

Who has lower energy?  
This is a very complex calculation.

Schrodinger's Equation  
It is the probability density of electrons and energy levels.

**Area** → Differentiation (Slicing)  
Integration (Putting together)

$$A = \pi r^2$$

$$\frac{dA}{dr} = \pi \cdot 2r = 2\pi r$$

How much area will change if radius changes by 0.007?

Find the area of a circle whose radius is 5.007. Don't use a calculator.

$$a = \pi r^2 = 3.14 \cdot (5.007)^2 = 78.71995 \text{ (calculator)}$$

Find area at  $r = 5$ .  
Then find the change in area if radius changes by 0.007.

$$a = 3.14 \cdot (5)^2 = 3.14 \cdot 25 = 78.5$$

Now how much area will change if radius changes by 0.007?

$$= \frac{dA}{dr} \cdot \Delta r \sim \frac{dA}{dr} \cdot \Delta r = \frac{dA}{dr} \cdot 0.007$$

$$\frac{dA}{dr} = \frac{d(\pi r^2)}{dr} = \pi \cdot \frac{d(r^2)}{dr} = \pi \cdot 2r = 2\pi r$$

$$= 2\pi \cdot 5 = 31.4$$

**Chemical calculation**

|       |   |   |   |        |   |
|-------|---|---|---|--------|---|
| $H_1$ | 1 | 1 | 0 | charge | 0 |
| $H_2$ | 1 | 1 | 1 | charge | 0 |
| $H_3$ | 1 | 1 | 1 | charge | 0 |

|       |   |   |   |        |   |
|-------|---|---|---|--------|---|
| $H_1$ | 1 | 1 | 0 | charge | 0 |
| $H_2$ | 1 | 1 | 1 | charge | 0 |
| $H_3$ | 1 | 1 | 1 | charge | 0 |

Isotopes  
Some atomic numbers are different mass numbers.

1 proton mass = 1837 electron mass  
1/1837 proton mass = 1 electron mass

proton ~ 1 amu  
neutron ~ 1 amu  
electron ~ 1/1837 amu

**Isobars**

|          |          |          |
|----------|----------|----------|
| $N^{14}$ | $C^{12}$ | $O^{16}$ |
|----------|----------|----------|

**Isotopes**

|          |          |          |

Why atomic mass of hydrogen is 1.008?

|       |               |         |
|-------|---------------|---------|
| $H^1$ | 1 + 0 + 0 = 1 | 0.99985 |
| $H^2$ | 1 + 0 + 1 = 2 | 0.00015 |
| $H^3$ | 1 + 0 + 2 = 3 | -       |

Average mass of hydrogen

$$1 \times 0.99985 + 2 \times 0.00015 = 1.008$$

Mass of proton is average of

$$\sin \frac{A+B}{2} = \sin \left( \frac{\pi - C}{2} \right) = \cos \frac{C}{2}$$

$$\cos \frac{A+B}{2} = \cos \left( \frac{\pi - C}{2} \right) = \sin \frac{C}{2}$$

$$A + B = \pi - C$$

$$\sin(A+B) = \sin(\pi - C) = \sin C$$

$$\cos(A+B) = \cos(\pi - C) = -\cos C$$

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

$$= \frac{abc}{9 \sin(A) \sin(B) \sin(C)}$$

$$\text{area} = \frac{1}{2} ab \sin C = \frac{1}{2} bc \sin A = \frac{1}{2} ca \sin B$$

$$\text{area}(\triangle OAB) = \frac{1}{2} \cdot r \sin \frac{\theta}{2} \cdot r \cos \frac{\theta}{2}$$

$$= \frac{1}{2} r^2 \sin \theta$$

$$(e^{i\theta})^2 = (\cos \theta + i \sin \theta)^2$$

$$\Rightarrow e^{i2\theta} = \cos^2 \theta - \sin^2 \theta + 2i \sin \theta \cos \theta$$

Real part  $\cos 2\theta = \cos^2 \theta - \sin^2 \theta$   
Im part  $\sin 2\theta = 2 \sin \theta \cos \theta$

$$\sin \theta = 2 \sin \frac{\theta}{2} \cos \frac{\theta}{2}$$

$$\text{area}(\triangle OAB) = \frac{1}{2} r^2 \sin \theta$$

We had lot of fun too!

# A collection of 2500 jokes! We read and enjoyed together.

This improved his English like never before. He developed skill to read and speak with confidence. Now, he is one in the batch who makes others laugh with his witty comments and jokes.

## Game: Read a Joke (Sentences)

CLEAR GRID

Little Ronnie's kindergarten class was on a field trip to their local police station where they saw pictures tacked to a bulletin board of the 10 most wanted criminals. One of the youngsters pointed to a picture and asked if it really was the photo of a wanted person.

'Yes, ' said the policeman. 'The detectives want very badly to capture him.'

Little Ronnie asked, 'Why didn't you keep him when you took his picture?'

## Game: Read a Joke (Sentences)

CLEAR GRID

After Sunday church, the priest would hand us each an orange and a big cookie. A little girl once lied and took two oranges, but the priest told her she mustn't lie because God is watching. Then, the girl took two cookies and lied about it. When asked why she had done that, she said because she thought that God was only watching oranges.

# We have fun classes once in a while

- We watch funny videos, tell/create funny stories and draw funny cartoons
- They provide them new/alternate perspectives and improves their analytical ability and sense of humor.

Don't forget that everything in this document is two year work of a student.

# We have developed our own software to expedite the learning process.

- The user interface is web-based or Jupyter Notebook.
- Jupyter Notebook enhances creativity and facilitates tackling complex topics.
- The content has been designed to facilitate accelerated learning, focusing on interconnected concepts to eliminate the need for
  - rote memorization,
  - homework, and
  - additional practice.

# The progress card

- He has already covered advanced topics, instilling in us the confidence to teach him AI/ML programming, which demands a deep understanding of complex mathematics and statistics to comprehend what is happening under the hood.

*How many students studying elsewhere can achieve so much in two years?*

# Please note that we ensured with him too

- No memorization\*
- No homework\*\*
- No extra assignments\*\*
- Programming is essential part of learning.

- When someone forgets something, we simply repeat it and this time it takes on tenth of the taken previous time for the same topic.

\*\* Homework kills creativity and analytical ability of students and they are forced to spend their time in doing repetitive and boring assignments.

# There is more:

- He is a state-level chess player, aspiring to become a professional chess player.
- SAT goal: 1590+
- This summer, they are learning AI/ML with Python. It will include:
  - scikit-learn
  - TensorFlow
  - PyTorch
  - Classification models
  - Regression models
  - Deep learning models

It's not just him; he's merely an illustrative case.

This isn't an isolated case; it's a typical story for all the students learning with us.

If you feel he is doing great, your kid could be in his place. We don't just cater to grade 9; we teach all school grades and college students. Moreover, we provide training to professionals in advanced science, math, and AI/ML.

Feel free to reach out to us by calling or messaging on WhatsApp at +91 75699 33343, or email us at [info@xcelvations.com](mailto:info@xcelvations.com).
